

Department of English Language and Literature Policy on the Use of Artificial Intelligence (AI)

Artificial intelligence tools can be useful in the educational process, but students must use them responsibly and in a legitimate manner. Under certain conditions, students may use AI as an auxiliary tool in their research, always adhering to sound academic practice, as explicitly stated below, and verifying the accuracy and validity of the information produced. It is important to use AI tools in a way that supports, rather than replaces, our own ideas and creativity.

Regarding the use of Artificial Intelligence tools, the Department of English Language and Literature, in accordance with Article 18 of the Code of Ethics of the National and Kapodistrian University of Athens, stipulates the following:

- a. The use of AI tools as a learning aid is encouraged and is in keeping with sound educational practice, but students should apply critical thinking when doing so.
- b. Direct copying from AI tools in assignments, exercises, and exams is prohibited. Instructors have the option of using digital detection tools to confirm the use of AI, bearing in mind that there is a margin of error in the results of such tools. In the event of unauthorized use of AI by students, further disciplinary measures may be taken by the instructor of the relevant course or by the Department.
- c. When using AI tools to complete assignments, students must state in writing which AI tool they used and how they used it.
- d. Instructors may adjust the assessment methods to ensure the integrity of the educational process (e.g., the assessment of assignments or written exams may be supplemented with an oral exam).
